

Bar Equipment

Ice Makers Britains Best Selling Ice Machine

It is most important to have a water filter in line with your Ice machine. Without a water filter calcium will build up during ice production. The calcium deposits on the components inside the ice maker, putting a coating on the evaporator and causing pumps to fail. More electricity is required to produce ice when the evaporator is coated with scale and eventually an expensive service call will be required, which is chargeable.

Remember, Fit a water filter in line with your ice machine, run a cleaning solution through your machine regularly, and clean the condenser regularly. Following these simple procedures will give your ice machine a long and economical life.

Construction

- Exterior stainless steel
- Large polypropylene storage bin
- 4 adjustable feet
- K20 side vented
- K40 front vented - can be built in

Refrigeration

- Fully automatic operation
- Hot wire system
- Refrigerant R134a
- 13 amp supply
- 17 minute cycle
