

Urinal flush controller

MODEL RANGE: | F1103 |

Flushing systems | Electronic urinal flushing systems

An intelligent solution to limit the waste of water in washrooms is available from Franke Sissons. A sophisticated automatic control system installed in minutes to give years of trouble free service, the anti-vandal urinal controller will significantly reduce water consumption and costs whilst maintaining the necessary high level of hygiene at all times. Urinal controller system detects when the facility has been used, allows cistern to fill which then flushes the urinal the normal way. An additional feature ensures that during long periods of inactivity, weekends and holidays, the urinal is flushed at least once every 12 or 24 hours as selected. In this way the hygienic flush keeps the urinals clean and fresh when the building is unattended. 240V AC, 50Hz mains operated

Technical data

Overall depth	35.00 mm
Overall height	125.00 mm
Overall width	80.00 mm
Type of operation	Sensor operation
Minimum flow pressure	0.10 bar
Maximum flow pressure	10.00 bar
Type of flushing fitting	Urinal flush valve
Product code	209.0000.002
